# Installation

### **Get Access to OMNI Platform**

To get started with OMNI Platform, you will need the following:

- User email and password. You can find this data in Platform configuration file settings.env in variables PLATFORM\_DEFAULT\_PASSWORD and PLATFORM\_DEFAULT\_EMAIL respectively.
- URL of deployed server. Domain for Platform deployment is set in file settings.env in variable DOMAIN. As a result, you can get access to OMNI Platform via URL: http://platform.\$DOMAIN. To deploy OMNI Platform, follow Administrator Guide.
- Windows or Linux OC
- USB-camera connected to your PC or access to the IP-camera you need to install OMNI Agent.

To get access to the Platform follow the URL of the deployed server in your web browser and enter user email and password. As a result, you will be redirected to the home page of the web interface.

### Install and Activate OMNI Agent

To start collecting data from your camera, you need to install and run OMNI Agent. Before installation make sure that your PC meets the following requirements:

#### Supported OS:

- Windows 10 (64-bit)
- Ubuntu 20.04 (64-bit)

#### Hardware Requirements:

Minimum:

- CPU: 4 x 2GHz with AVX support
- RAM: 1GB
- HDD: 2.5GB

#### Recommended:

- CPU: 4 x 3.1 GHz with AVX support
- RAM: 2GB
- HDD: 2.5+GB

Specified requirements correspond to 1 video stream in 1080p (Full HD) and 5 persons in the frame at the same time (database size up to 50K faces).

#### Notes:

- If you use Windows, you might need to install <u>Microsoft Visual C++ Redistributable for</u> <u>Visual Studio</u> before installing OMNI Agent.
- 2. If you use Linux, you need to set up the execution permission for the installer before running. To set up the execution permission to the installer, follow these steps:
- Go to the directory, where OMNI Agent installer is downloaded to, and click the right button on the installation file.
- Open Properties, go to the Permission tab, and check Allow execute checkbox.

To install and activate OMNI Agent, follow the instructions below:

- 1. Launch OMNI Agent setup program from the distribution kit and follow the installation wizard's instructions
- 2. Once the downloading is completed, run OMNI Agent. At the web page enter the URL of the deployed server (self-hosted) and click on *Next* button.
- 3. Sign in to OMNI Agent using user email and password of your OMNI Platform account.

→] Sign	In	
Email		
0		
Password		
¢		**
	Sign In	
	Sign m	

4. Add an IP or USB camera:

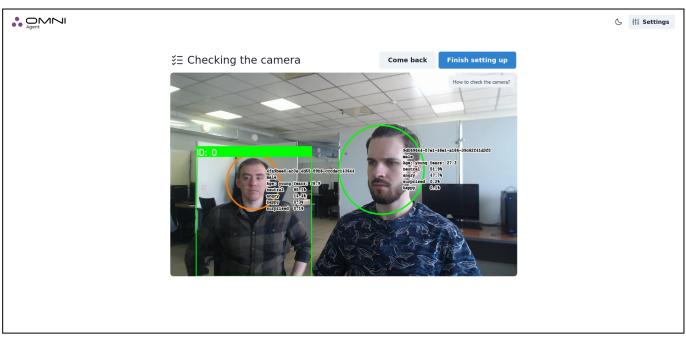

- To use an IP camera, enter the camera URL.
- To use a USB camera, connect the camera to your PC and select it from the list of connected cameras.

To apply settings, click on *Check the camera* button. As a result, the camera checking page will appear in your web browser.

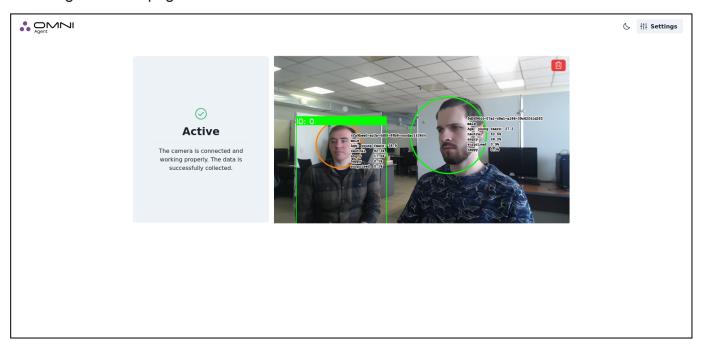

⊕ Add a camera
URL of camera
<u>©</u>
or select a camera from the list below
$\hfill\square 1$ No cameras connected $\hfill \lor$
Check the camera

5. At the camera checking page you can see the video from the camera and the information about the detected persons (their gender, age, emotions, etc.). The detected faces and silhouettes can be highlighted as follows:

- Red circle: a face is detected but the person attention is none
- White circle: both a face and the person attention are detected
- *Dotted circle:* image quality is insufficient or head rotation angle is not applicable for proper detection
- Green circle: a face is detected and recognized but the person attention is not registered
- Orange circle: a face is detected and recognized and the person attention is registered
- Green bounding box: a human silhouette is detected and has an ID
- Red bounding box: a human silhouette is detected, but an ID is not assigned yet

6. To save the camera settings, click on the Finish *setting up* button. As a result, you'll see OMNI Agent status page.

**Note:** To protect the personal data, OMNI Platform has the anonymous mode enabled by default. In the anonymous mode, face images aren't stored at OMNI Platform to ensure personal data protection and exclude a possibility of person recognition outside the system. To enable/disable the anonymous mode, click on *Settings* icon at OMNI Agent status page and select an appropriate option in the opened tab.

# **Web Interface Settings**

### Language Selection

By default, the web interface supports English and Russian languages. To change the language, just set the appropriate one in your web browser.

### **Theme Selection**

Web interface has a light theme enabled by default. You can change the theme by clicking the *Theme* icon at the top right side of the web interface.

### **Quick View Panels**

Home page contains a set of quick view panels to monitor the main system objects and get access to them via web interface. These panels include OMNI Agents, Activities, New Notifications and Profiles.

④ OMNI Agents	∿ Activities	D New notifications	Q2 Profiles
1 stopped	49	0	11

#### **OMNI Agents**

The OMNI Agents panel shows the number of created OMNI Agents and their statuses such as active or stopped. For more details about agents, click on this panel to move to OMNI Agents section where you can create and configure agents.

#### Activities

Activities panel displays the total number of activities collected by OMNI Agents. To view the information about activities, click on this panel to move to the Activities page.

#### **New Notifications**

This panel shows the number of new notifications sent by OMNI Agents and received within the system. To view the list of new notifications with metadata, click on this panel to move to Notifications page.

#### Profiles

Profiles panel displays the number of profiles created in the database. Clicking this panel will redirect you to the Profiles page where you can create/remove and configure Profiles.

### **Quick Start Panel**

Quick Start Panel contains step-by-step instructions on how to connect OMNI Agent and get started with the Platform. Before starting with the instructions, make sure that OMNI Platform is already deployed on your server, otherwise follow the Administrator Guide for deployment.

### **Resources Panel**

Resources panel provides instant access to special platforms for Platform API testing. To test API without special platforms, you need to get an access token (authorization key) and add it to HTTP request header, as in the example { TOKEN: 168922\*\*\* }.

# **Profiles**

Profile is an object that contains metadata about a person, person's photo (avatar), activities and a set of samples, including the main sample. A biometric template from the main sample is used by an agent to check for a profile in the database, and by the platform - to determine a profile which the new activities should be attached to.

# **Create Profiles**

To create a profile, you need to upload a person's image (avatar) to the platform and fill in the profile data. In the default profile card, you can specify a name, gender, date of birth, description, and add the created profile to a watchlist.

When creating a profile, the system automatically estimates the gender and age of a person according to the uploaded avatar. If the date of birth is specified in the profile card, then the age will be calculated relative to this date, otherwise, the age calculated by the system will be shown.

If OMNI agent sends the activity of a person, who does not have a profile in the database, the system allows to generate a profile directly from the received activity. To do this, just click the "Create profile from activity" button for a specific activity on the Activities page. In this case, the best shot will automatically be used as the avatar.

#### **Create a Single Profile**

To create a profile manually, do the following:

1. Open Profiles page via Profiles sidebar item in web interface or using Profiles panel at home page. At the page, click *Create a Profile* button.

	Home					G	@ example@mail.com
Home Home Home Notifications Rome Profiles Rome Scalars Scalars Comparison C		<pre>@ OMNI Agents 0</pre>	Ar Activities 0 15:20 · Wedneso	New notifications	R Profiles 9		
		✓ Quick Start <ol> <li>Install OMNI Agent using the installer.</li> <li>Launch OMNI Agent and go through a</li> <li>Make sure that the data on OMNI Age updated.</li> <li>Also the archive contains a user manual that it is used for.</li> </ol>	II the activation steps. nts, activities and profiles has been	Resources      Authorization key Use this key to access the API      d324438-fd2c-4084-8678-2dd8f      ) Platform API An interactive console for Platform API to      Image API An interactive console for Image API test	esting	ру	
© All Rights Reserved 3DIVi Inc.							

2. Fill in profile data at the opened window. Here you need to upload a profile avatar, as the main sample, used for identification, is created based on this uploaded image. Avatar image should meet the following requirements:

- The image is of good quality, clear, without shadows, bright illumination and glare.
- The image contains only one face.
- The image is full-face.
- The face in the image is in a vertical position.
- We recommend that you do not upload images with a large face inclination angle.
- Facial expression is neutral.
- The eyes of the person in the image are open
- The image size is no more than 6mb.
- Image format is jpg, png, and bmp.
- Image height and width do not exceed 4032 pixels

When the avatar is uploaded, click the Create button.

**Note:** To create profiles from your dataset images you can use a special script, included into the Platform distribution kit. The script accepts a file that contains paths to dataset images, and then sends requests to the Platform to create profiles from these images.

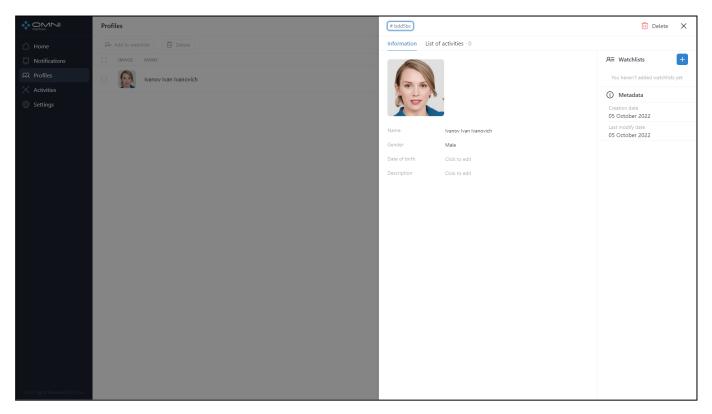

### **View Profiles**

To view profiles, do the following:

1. Open Profiles page that displays a table with profiles created in the database.

	Profiles	(	+ Create a pr	ofile 🗸 🗸	@ example@mai	il.com
🛆 Home	Q• Add to watchlist			C	Automatic updates	7
Notifications	I IMAGE NAME	GENDER	AGE	WATCHLISTS	ACTIVITIES	(1)
ୟ Profiles	Ivanov Ivan Ivanovich	Male	~ 25 years	_	0	0
Activities	25				Viewed 1 from 1	
Settings					viewed i from i	
© All Rights Reserved 3DiVi Inc.						

2. To view detailed profile information, click the table line to open a profile card. The card contains profile description, watchlists the profile is added to, activities, creation date, last modification date and button with shortened profile ID. To see the full ID, just hover over this button. If you click it, the ID will be copied to the clipboard.

### **Edit Profiles**

1. Open a profile card by clicking the table line:

2. You can change the following fields in the card: avatar, name, gender, date of birth and description. Also, via the card you can add/remove a profile from the watchlist. To interact with

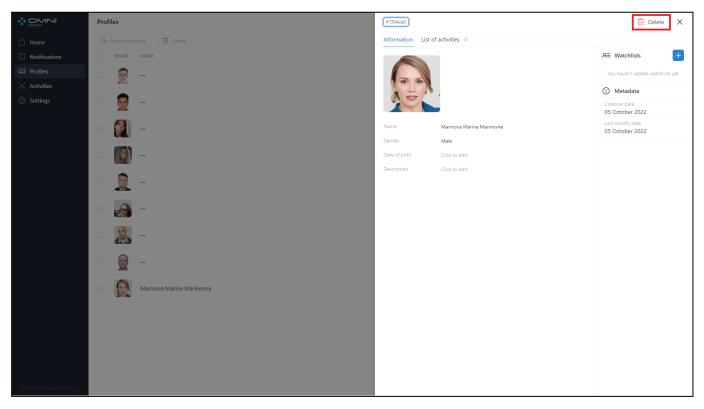

watchlists, you can also use the Watchlists section. After data is changed, click the Save button. As a result, profile data will be changed.

Automatic update can be enabled by clicking a toggle button or just by updating the page.

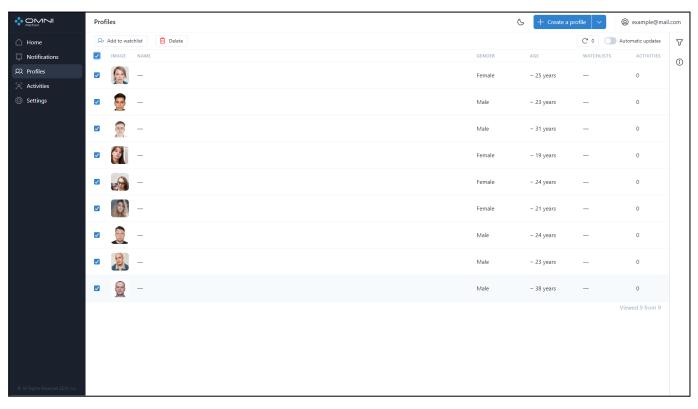

### **Add/Delete Multiple Profiles**

The system contains the functionality to reduce routine operations with multiple profiles:

- Deleting multiple profiles from the database
- Adding multiple profiles to watchlists

To add/delete multiple profiles, do the following:

1. At the Profiles page choose profiles to add or delete. To choose all the profiles on the page, put a tick in a checkbox in the table header.

2. Choose a watchlist where to add profiles to, and, as a result, all selected profiles will be added to this watchlist.

Deleting profiles from the database works the same.

**Note** that when deleting several persons, the deleting process will start up without confirmation after you click the Delete button.

### **Filtering and Sorting**

The system contains a list of filters and sorting options. Profiles are filtered by the following parameters:

- Avatar presence
- Profile IDs
- Age
- Name
- Description
- Watchlists
- Gender

Sorting options are the following:

- Creation date
- Last modification date
- Name
- Age
- Gender

#### • Watchlist name

To configure filters, click the Filtering icon at the top right side of the web interface under the Account button.

# Watchlists

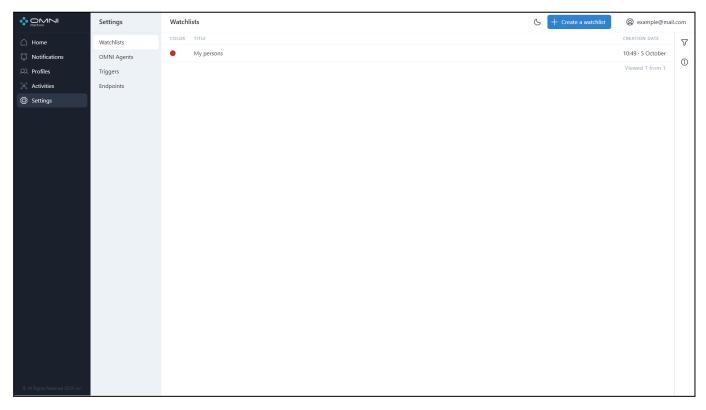

Watchlist is an object used for profile grouping and receiving notifications. It contains a number of profile IDs, watchlist metadata and attached trigger. If the detected activity belongs to a profile from this watchlist, the system enables this attached trigger with the condition to create and send a notification.

### **Create Watchlists**

When creating an account, the system automatically creates *My persons* watchlist with a pre-created and attached trigger. Just add a profile to this watchlist and receive notifications within the system without additional settings.

To create a watchlist, do the following:

1. Go to Settings page, choose Watchlists section and click Create a Watchlist button.

2. Fill in the watchlist name, select a color and click Save button.

	Settings	Watchlists	Watchlist creation	1	×

**Note:** to receive notifications on this watchlist, you need to create a trigger and attach it to the watchlist. Trigger can be attached to the watchlist when editing the watchlist or creating the

trigger. To learn how to create a trigger and attach it to the watchlist, see the Triggers section of the User Guide.

### **View Watchlists**

To view the existing watchlists, do the following:

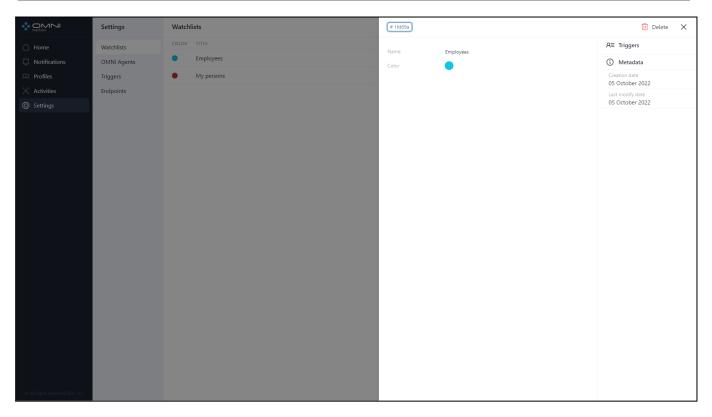

- 1. Go to the Settings page and select the Watchlists section. The page displays a table with the watchlists currently existing in the database. On the first visit you'll see *My persons* watchlist, created by default when the account is created.
- 2. To view detailed information, click on a row in the table to open the watchlist card. The card displays a watchlist name, color, creation date, last modification date and a button with a shortened ID. To see the full ID, just hover over this button. If you click the button, the watchlist ID will be copied to the clipboard.

### **Edit Watchlists**

To edit watchlists, do the following:

1. Open a watchlist card by clicking a table row of this watchlist.

2. In the card you can change name, color and remove a trigger. The removed trigger will be deleted from the database. To change color or name click on the appropriate fields. To configure triggers, move to the Triggers section of the Settings page. After changes, click the Save button.

# Triggers

Trigger is an object needed to create and send a notification to endpoints if the activity data satisfies the trigger condition. Trigger contains a trigger condition, a set of endpoints, and ID of the watchlist it is attached to.

### **Create Triggers**

When creating an account, the system automatically creates a trigger for *My persons* watchlist with an endpoint attached. You can view this trigger at the Triggers section of the Settings page. To create a trigger, do the following:

1. Open Settings page, select Triggers section and click on *Create a Trigger* button.

	Settings	Triggers		🕒 🕂 Create a	a trigger	example@mail.com
🛆 Home	Watchlists	TITLE	NUMBER OF ENDPOINTS	CREATION DATE	√ Filters	×

# Endpoints

Endpoint is an object that contains data about the point where notifications are sent to. To send notifications, you need to attach an endpoint to the trigger.

Types of Endpoints

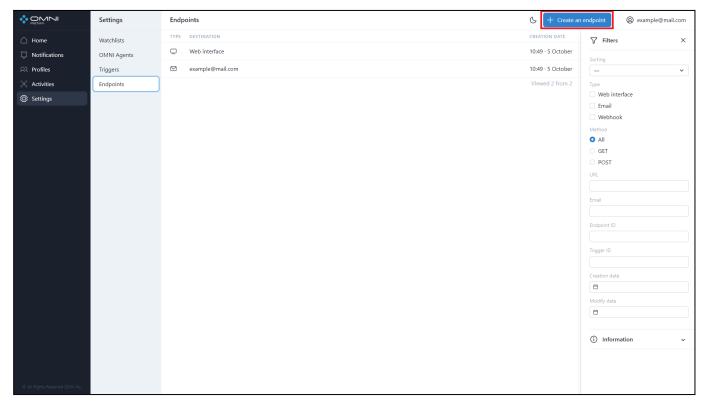

- Web interface notifications shown in web browser
- Email notifications sent to email address
- Webhook notifications sent via webhook

## **Create Endpoints**

When creating an account, the system automatically creates one web interface endpoint and one email endpoint. Email address used to create an endpoint is the address specified for signing up. You can add additional endpoints such as email or webhook, but the web interface endpoint is created by default and remains the only one endpoint of this type.

To create an endpoint, do the following:

1. Go to Settings page, select Endpoints section and click on Create an Endpoint button.

2. Select the type of endpoint, fill in all information fields and click on the Create button.

	Settings	Endpoints	Endpoint creation	n	×
🛆 Home	Watchlists	TYPE DESTINATION	T

# Activities

Activity is an object created when a person is detected by OMNI Agent. When a person appears in the frame, OMNI Agent takes a photo, checks it for quality, identifies the person and collects activity data. After that, the agent checks the activity sample and the main samples for similarity of the biometric template.

If the similarity result is equal to or higher than the threshold value (99%) for a particular profile, the activity is sent to the Platform with this profile ID and added to this profile.

If the similarity result for all profiles in the database is lower than the threshold value, the activity is sent to the Platform without profile data and then a new profile is created.

#### **View Activities**

1. To view the existing activities, open Activities page via web interface sidebar menu or through Activities quick view panel on the main page.

2 The page displays a table with the activities existing in the database.

#### **Anonymous Activities**

In the anonymous mode OMNI Agent processes not the images themselves, but digital representations of faces, which excludes identification of a person outside the system and ensures the protection of personal data.

If a person is detected by OMNI Agent with enabled anonymous mode, the activity table will not contain a photo of this person, but a special icon instead. Hovering over it will show a hint that this activity is anonymous.

## **Activity status**

On the activity page, when you hover over the icon, you can view the status for each specific activity. Each activity can have one of three statuses: PROGRESS - a person is in the frame and the activity is not completed; FINALIZED - the person left the frame, the activity is completed; FAILED - there is no information about the update or termination of activity from the agent. It happens when connection with the agent fails for more than 30 seconds.

Activity Completed: The person is out of the frame.

# **Notifications**

Notification is an object used to notify the user about activities related to profiles that have been added to watchlists.

### **Get Notifications**

Notification is automatically generated when the system receives activity that satisfies the trigger condition. For a certain watchlist this condition is as follows: the biometric data of received activity match the biometric data of a profile from this watchlist.

To provide auto-generation of notifications, follow the instructions below:

- Create a profile and a watchlist
- Add the profile to the created watchlist
- Attach a trigger to the watchlist
- Attach an endpoint to the trigger

As a result, when a person from this watchlist is detected by OMNI Agent, you'll receive an instant notification on this event.

© All Rights Reserved 3DiVi Inc.	A Back 1	2 Next					Viewed 15-23 from 23	

If a notification is generated, but you don't receive pop-up, email or webhook notifications, make sure that a trigger has an endpoint attached.

## **Pop-Up Notifications**

Pop-up notification is a pop-up window at the lower right side of the web interface that shows brief information about the notification: photo (or profile avatar if the agent was in anonymous mode), profile name, agent name and watchlist. This notification lasts for 30 seconds, then disappears. By clicking on the pop-up notification itself, you'll be redirected to the Notifications page. No pop-up notifications will be displayed at the Notifications page.

Click the table view button and notifications will be displayed as a table:

Click the tile view button and notifications will be displayed as tiles:

Displayed notification data:

- Images of body and face taken from the activity and profile avatar. The images of body and face from the activity are shown if the images of sufficient quality are taken. The possible reasons for image missing: OMNI Agent works in the anonymous mode or the person's face or body did not get into the frame.
- Watchlist name

- Agent name
- Description (only for tile view). Allows to add or edit a profile description.
- Icons of endpoints where the notification was sent to (only for table view).
- Button to mark notifications as read
- Creation date

## **Automatic Update**

When multiple OMNI Agents work simultaneously, new objects can be created by the system too often, so they can hinder interactions with previously created objects. In this case you can disable automatic data update.

To disable automatic update, click the toggle button in the header of Notifications page.

# Agents

Agent is an object used to display OMNI Agent data: current status, name, creation date and last update date.

## **Create Agent**

Agent object is created automatically after installation and login to OMNI Agent.

## **View Agents**

To view existing agents, do the following:

1. Open Agents section via Agents quick view panel on the home page.

	Home					C	@ example@mail.com
Home Home Home Home Home Home Home Home		⊕ OMNI Agents 1 ✓ Quick Start	Ar Activities 0 16:10 ⋅ Wedness	A New notifications	Q Profiles 9
